Massage therapy is commonly used for relaxation and pain relief, in addition to a variety of health conditions such as osteoarthritis, fibromyalgia, and inflammation after exercise. It’s important to know that massage therapy can also be an effective therapy for many aspects of mental health. In fact, recent research suggests that symptoms of stress, anxiety and depression (all associated with mental health) may be directly affected with massage therapy.

Below are some recent research findings which highlight the role of massage therapy in mental health and wellness, compiled by the American Massage Therapy Association.

**Massage Therapy for the Treatment of Depression in Individuals With HIV**
Research published in The Journal of Alternative and Complementary Medicine indicates that massage therapy can reduce symptoms of depression for individuals with HIV disease. The study lasted eight weeks, and results show massage significantly reduced the severity of depression beginning at week four and continuing at weeks six and eight. American Massage Therapy Association President Winona Bontrager says of the study, “This research suggests that regular therapeutic massage could be a useful tool in the integrated treatment of depression for patients with HIV.”

**Massage Therapy to Reduce Anxiety in Cancer Patients Receiving Chemotherapy**
Research published in Applied Nursing Research shows that back massage given during chemotherapy can significantly reduce anxiety and acute fatigue. This research demonstrates the potential value of massage therapy within the full cancer treatment spectrum, particularly during the often mentally and physically exhausting chemotherapy process,” says American Massage Therapy Association President Winona Bontrager.

**Massage Therapy for Nurses to Reduce Work-Related Stress**
Research published in Complementary Therapies in Clinical Practice shows that massage for nurses during work hours can help to reduce stress and related symptoms, including headaches, shoulder tension, insomnia, fatigue, and muscle and joint pain. “This study affirms the important role massage therapy can play in the work setting, in this case to ease stress for health care providers who, in turn, can better provide optimal patient care,” says American Massage Therapy Association President Winona Bontrager.
